Overview

Formula

Short Abstract

Soil indicators - How To access to data

To access the soil data, users must be registered in the system and submit a request to the data managers, specifically the SIS staff, using the contact details provided on the **"Data Policy"** page. The link to the **"Data Policy"** page is located at the bottom of the home page, as shown in Figure 1.

Soil indicator name

area of Interest

observation period

depth

type

identifier or name of the project, survey activity, or campaign

method

survey method

Identifier	Code	Description
SURVEY_METHODS:CP	CP	method: CPCS;
SURVEY_METHODS:FA	FA	method: FAO
SURVEY_METHODS:FA06	FA06	method: FAO; year: 2006
SURVEY_METHODS:FA52	FA52	method: FAO; year: 1952
SURVEY_METHODS:FA77	FA77	method: FAO; year: 1977
SURVEY_METHODS:FA90	FA90	method: FAO; year: 1990
SURVEY_METHODS:US	US	method: USDA soil survey manual
SURVEY_METHODS:US18	US18	method: USDA soil survey manual ; year: 2018
SURVEY_METHODS:US52	US52	method: USDA soil survey manual ; year: 1952
SURVEY_METHODS:US62	US62	method: USDA soil survey manual ; year: 1962
SURVEY_METHODS:US75	US75	method: USDA soil survey manual ; year: 1975
SURVEY_METHODS:US93	US93	method: USDA soil survey manual ; year: 1993
SURVEY_METHODS:WR	WR	method: WRB;
SURVEY_METHODS:WR22	WR22	method: WRB; year: 2022

ordinary kriging

filtered

points, interpolated data, and the aggregated points used for the interpolation

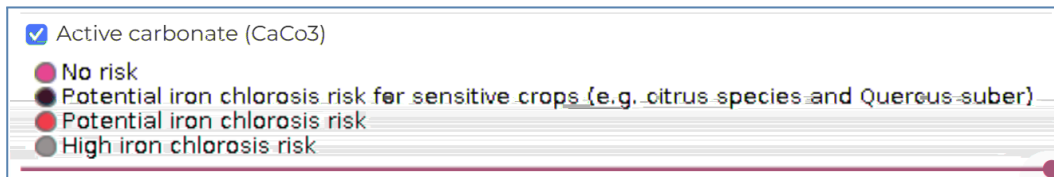

List of soil indicators

Active carbonate (CaCo3)

Short abstract

%

Legend and value threshold:

label	rule
No risk	
Potential iron chlorosis risk for sensitive crops (e.g. citrus species and Quercus suber)	
Potential iron chlorosis risk	
High iron chlorosis risk

RC_{Zn} Zinc Relative Content

Short abstract

Legend and value threshold:

☒ Zinc (Zn) zinc relative content
☐ Zinc below natural geochemical relative range
☐ Zinc natural geochemical relative range
☐ Zinc above natural geochemical relative range

label	rule
Zinc below natural geochemical relative range	
Zinc natural geochemical relative range	
Zinc above natural geochemical relative range	

SIS code name

Measure unit %

Category

Involved SIS tables

Formula

$$RC_{Zn} = \frac{zn}{[cu + zn + pb]} * 100$$

Water Infiltration Potential

Short abstract

Legend and value threshold:

☒ Water Infiltration Potential

Low layer infiltration potential

Good layer infiltration potential (No threshold for over infiltration risk)

label	rule
Low layer infiltration potential	
Good layer infiltration potential (No threshold for over infiltration risk)

Rupture resistance cemented soil

Short abstract

Legend and value threshold:

Legend ☒ Rupture resistance cemented soil - Not cemented (NOC) - Potentially sensitive to wind erosion - Extremely weakly, very weakly and weakly cemented (EWC, VWC and WEC) - Moderate potential for wind erosion - Moderately cemented and Strongly cemented (MOC and STC) - Low potential for wind erosion - Very strongly cemented (VSC) and Extremely strongly cemented (EXC) - Very low potential for wind erosion

label	rule
Not cemented - Potentially sensitive to wind erosion	
Extremely weakly, very weakly and weakly cemented - Moderate potential for wind erosion	
Moderately cemented and Strongly cemented - Low potential for wind erosion	
Very strongly cemented and Extremely strongly cemented - Very low potential for wind erosion

Texture

Short abstract

Legend and value threshold:

☒ texture

Clay and Silty clay - Very slow infiltration rate

Sandy clay loam and sandy clay - Slow infiltration rate

Sandy loam, loam, silt loam, clay loam, silty clay loam, silt - Moderate infiltration rate

Sand and loamy sand - High infiltration rate

label	rule
Clay and Silty clay - Very slow infiltration rate (C)	
Sandy clay loam and sandy clay - Slow infiltration rate (SCL, SC)	
Sandy loam, loam, silt loam, clay loam, silty clay loam, silt - Moderate infiltration rate (SL, L, SiL, CL, SiCL, Si)	
Sand and loamy sand - High infiltration rate (S, LS)
